

RECSER OY PRICE LIST STARTING FROM 1 JANUARY 2024

The fees collected from producers are used to cover the costs of collecting, transporting, processing and recycling used batteries and accumulators, as well as information provision. The fees are also used to cover the costs of supervising and instructing the collection and recycling network, official reporting, producer services, financial administration and lobbying, and to meet the legally prescribed solvency requirement. VAT will be added to the prices in accordance with the regulations in force.

Recser Oy will invoice companies for any administrative costs incurred from the collection of overdue reports in accordance with the terms of agreement (€150 / reminder invoice).

REGISTRATION FEE

A one-off registration fee is collected from each producer when registering as a producer or in connection with additional registrations concerning product groups.

PRODUCT CODE	DESCRIPTION	FEE
Registration fee A	Registration fee for portable batteries and accumulators ¹	€300
Registration fee B	Registration fee for industrial accumulators ^{2,4} and/or portable lithium automotive batteries and accumulators ³	€500
Registration fee C	Registration fee for portable batteries and accumulators + industrial accumulators and/or portable lithium automotive batteries and accumulators	€700
Registration fee D	Additional registration of industrial accumulators and/or portable lithium automotive batteries and accumulators for producers who has been registered before 27 March 2020	€200

ANNUAL FEES

The annually recurring fees apply to producers of batteries and accumulators designed exclusively for industrial and professional use, as well as producers of vehicle and industrial lead-acid accumulators. An annual fee includes the minimum recycling charge for vehicle and industrial lead-acid accumulators.

PRODUCT CODE	DESCRIPTION	FEE
Annual fee A	Annual fee for producers of batteries and accumulators designed exclusively for industrial and professional use (less than 1,000 kg/year brought to the market)	€250
Annual fee B	Annual fee for producers of batteries and accumulators designed exclusively for industrial and professional use (1,000–100,000 kg/year brought to the market)	€500
Annual fee C	Annual fee for producers of batteries and accumulators designed exclusively for industrial and professional use (more than 100,000 kg/year brought to the market)	€750
Annual fee D	Minimum recycling fee (annual fee) for producers of lead industrial accumulators and automotive lead accumulators	€100
	Recser Oy forwards fees and information to Akkukierrätys Pb Oy, which takes care of collecting and recycling automotive lead batteries and accumulators.	

RECYCLING FEES

Recycling fees are invoiced on a quarterly based on the producer's reported amounts of batteries and accumulators placed on the market. Our weight limits are set according to the battery and accumulator categories of the upcoming EU Battery Regulation.

PORTABLE BATTERIES AND ACCUMULATORS ¹ (UNDER 5 KILOS)

PRODUCT CODE	REPORTING CLASS	FEE
2011	Alkaline batteries	€0.90/kg
	Alkaline, zinc-carbon, zinc air and similar primary batteries (AAA, AA, C, D, etc.)	
2021	Lithium batteries (Li)	€1.50/kg
	Lithium button cells and other lithium primary batteries (non-rechargeable)	
2031	Nickel-cadmium batteries (NiCd)	€2.00/kg
2041	Nickel-metal hydride batteries (NiMh)	€0.20/kg
2051	Small cobalt-containing lithium batteries (Li-ion, Li-Pol, etc., less than 0.5 kg)	€0.20/kg
	Cobalt-containing lithium batteries (e.g. the batteries of mobile phones, laptop computers and other portable IT devices and digital cameras, incl. cathode materials LCO, NMC)	
2081	Other small lithium batteries (Li-ion, Li-Pol, etc., less than 0.5 kg)	€0.70/kg
	Other lithium batteries weighing less than 0.5 kg than those mentioned in product group 2051 (e.g. the batteries of electric and electronic tools, incl. cathode materials LMO, LFP, LTO)	
9101	Large lithium accumulators (Li-Ion, Li-Pol, etc., 0.5 kg and above)	€1.00/kg
	All lithium accumulators weighing 0.5 kg or more. Note! Traction batteries of electric motorcycles, etc. are reported in the class "Portable lithium industrial accumulators" and lithium starter batteries for e.g. mopeds in the class "Portable lithium automotive batteries and accumulators".	
2061	Sealed lead accumulators for consumer use (Pb)	€0.10/kg
	Note! Industrial lead accumulators have their own price group under the 'Industrial batteries' main group.	
2071	Silver oxide batteries	€0.20/kg
	Silver oxide batteries for watches, calculators, etc.	

SMALL PORTABLE INDUSTRIAL ACCUMULATORS ² (UNDER 10 KILOS)

Industrial batteries and accumulators are batteries and accumulators designed exclusively for industrial or professional use or used in electric vehicles. Note! Traction batteries of electrically powered vehicles, such as electric and hybrid cars, are reported to [Finnish Car Recycling Ltd.](#)

PRODUCT CODE	REPORTING CLASS	FEE
2095	Small portable lithium-ion accumulators for industrial use (Li-ion, etc.)	€1.00/kg
	Incl. traction batteries and accumulators for electric means of transportation, such as electric bicycles and electric scooters, etc.	
2117	Small portable alkaline batteries for industrial use	€0.90/kg
2118	Small portable nickel-cadmium accumulators for industrial use (NiCad)	€2.00/kg
2119	Small portable nickel metal hydride accumulators for industrial use (NiMh)	€0.20/kg

MEDIUM-SIZED PORTABLE INDUSTRIAL ACCUMULATORS ² (10–25 KILOS)

PRODUCT CODE	REPORTING CLASS	FEE
2124	Medium-sized portable lithium-ion accumulators for industrial use	€1.00/kg
	For example, smallish leisure batteries for storing energy and those sold to consumers.	
2125	Medium-sized portable alkaline batteries for industrial use	€0.90/kg
2126	Medium-sized portable nickel-cadmium accumulators for industrial use (NiCad)	€2.00/kg
2127	Medium-sized portable nickel metal hydride accumulators for industrial use (NiMh)	€0.20/kg

LARGE INDUSTRIAL ACCUMULATORS ⁴ (OVER 25 KILOS)

Recser does not collect recycling fees from producers of large industrial accumulators for accumulators placed on the market. Instead, the recycling fees are collected when accumulators are returned for recycling. The recycling fees are collected from the producer or, if so separately agreed, the end user when accumulators are returned for recycling.

PRODUCT CODE	REPORTING CLASS	FEE
2120	Large industrial alkaline batteries	-
2121	Large industrial lithium accumulators (Li-ion, etc.)	-
2122	Large industrial nickel-cadmium accumulators (NiCd)	-
2123	Large industrial nickel-metal hydride accumulators (NiMh)	-

INDUSTRIAL LEAD ACCUMULATORS (REGARDLESS OF SIZE)

PRODUCT CODE	REPORTING CLASS	FEE
7004	Industrial lead accumulators (Pb)	€0,001/kg
	All industrial lead accumulators designed solely for industrial and professional use. Recser Oy forwards recycling fees and information to Akkukierrätys Pb Oy, which takes care of collecting and recycling industrial lead accumulators.	

AUTOMOTIVE BATTERIES

An automotive battery or accumulator refers to a battery or accumulator used for automotive starter, lighting or ignition power. Note! Traction batteries and accumulators used in electric means of transportation, such as electric bicycles and electric scooters, have their own price group under the 'industrial accumulators' main group.

PRODUCT CODE	REPORTING CLASS	FEE
2096	Portable lithium automotive batteries and accumulators ³	€1.00/kg
	All starter batteries of mopeds, motorbikes, quad bikes, scooters, cars and ride-on mowers that are small enough to be carried manually.	
7001	Automotive lead batteries and accumulators	€0,001/kg
	Recser Oy forwards recycling fees and information to Akkukierrätys Pb Oy, which takes care of collecting and recycling automotive lead batteries and accumulators.	

DEFINITIONS**1) Portable battery or accumulator**

'A portable battery or accumulator' refers to a battery, accumulator or battery unit that is sealed, can be easily carried by hand and is not an industrial or automotive battery or accumulator. (Government Decree 520/2014 (Battery Decree), section 2, subsection 1, paragraph 4).

2) Portable industrial battery or accumulator

'A portable industrial battery or accumulator' refers to an industrial battery or accumulator (as defined in Section 2(1)(7) of the Battery Decree) other than a lead-acid battery or accumulator, the size of which allows for manual carrying. Portable industrial batteries and accumulators include those designed exclusively for industrial and professional use, as well as batteries sold to consumers, such as those used in electric vehicles. In other words, portable industrial accumulators include accumulators used in electric means of transportation, such as electric bicycles (excluding the traction batteries of electric motorbikes), as well as those accumulators that weigh under 25 kilos and are intended for storing energy and leisure use.

3) Portable lithium automotive battery or accumulator

'A portable lithium-ion automotive battery or accumulator' refers to a lithium-based battery or accumulator (as defined in Section 2(1)(6) of the Battery Decree) that is sealed and the size of which allows for manual carrying. Automotive batteries and accumulators include those used for vehicle starters, lighting or ignition power. As such, portable lithium automotive accumulators include accumulators used as starter batteries in mopeds, motorbikes, quad bikes, scooters, cars and ride-on mowers.

4) Large industrial battery or accumulator

'A large industrial battery or accumulator' refers to an industrial battery or accumulator designed exclusively for industrial or professional use (as defined in Section 2(1)(7) of the Battery Decree) other than a lead-acid battery or accumulator, the size of which does not allow for easy manual carrying. In this context, large industrial batteries and accumulators do not refer to the accumulators of electric vehicles, such as electric and hybrid cars or electric motorbikes, in which the accumulator is integrated into the device and not intended for the end user to remove at any point.
